

CALL FOR APPLICATIONS

We are delighted to announce a call for applications for the Sustained Training in Aging and HIV Research (STAHR) Program at the University of California San Diego. This program aims to develop promising scientists into high quality independently-funded researchers whose long-term careers will make a lasting contribution to the area of HIV and aging mental health research, including neurocognitive impairment. The STAHR program is aimed at clinical and translational post-doctoral fellows and junior faculty from across the United States, with previous training in either aging or HIV research, but interested in gaining expertise in the intersection of these two factors. STAHR scholars will attend a summer institute and workshop, which will be held virtually from June 21st to July 16th, 2021.

APPLICATION DEADLINE: APRIL 2nd, 2021

Eligibility: Applicants must be post-residency fellows, post-doctoral fellows, or junior faculty members (holding no higher than an Assistant Professor rank position) with a clinical or translational research background and prior training in aging or HIV research.

Candidates with a background in aging research and those of underrepresented backgrounds are especially encouraged to apply. Applicants should be U.S. citizens or permanent residents.

Please see the **STAHR webpage** for further information about the program:
